

THE FIRST CLOUD-BASED FIRE PUMP MONITORING SYSTEM

PEERLESS FIRECONNECT®

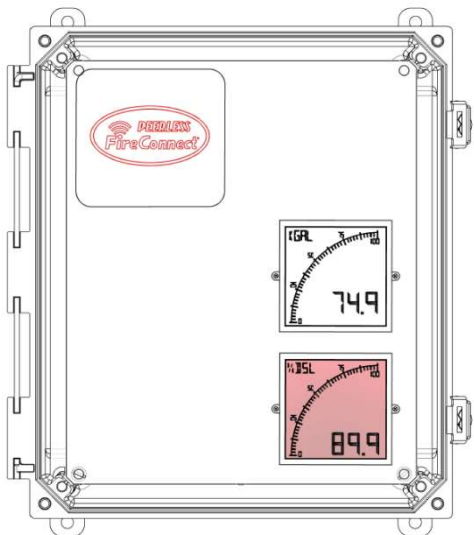

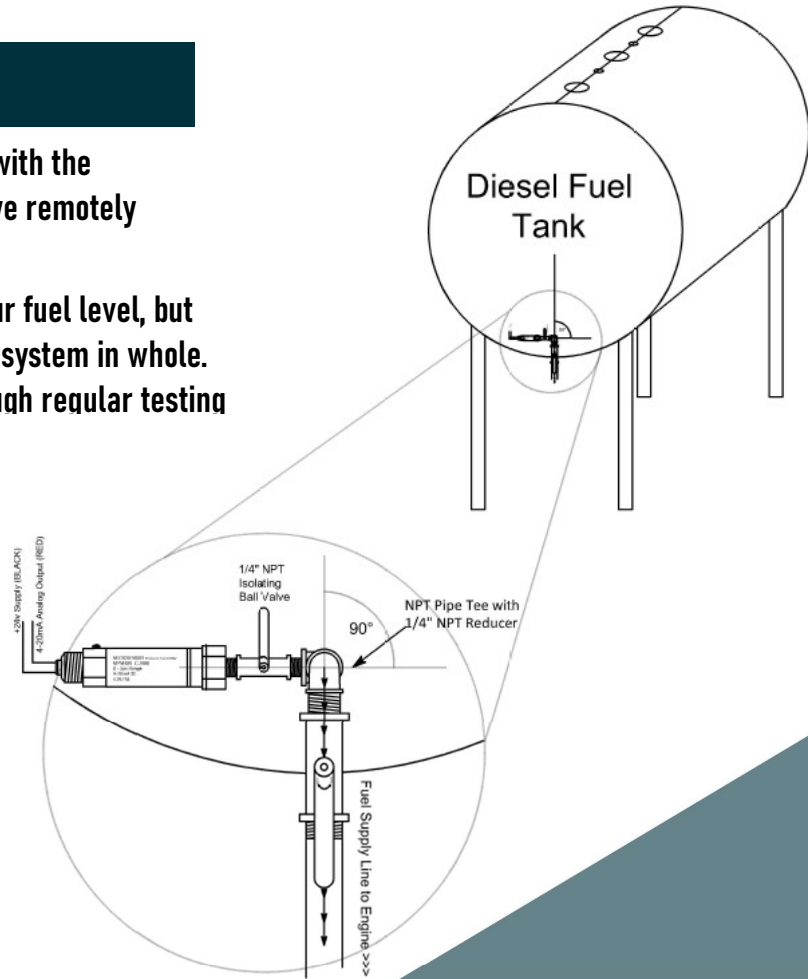

The First Cloud-based Solution Capable Of Modernizing Any Fire Pump System
Providing Real-time Remote Monitoring For Any Fire Pump System
Whenever And Wherever You Need It

DIESEL FUEL TANK LEVEL MONITORING & LOCAL DISPLAY

PRODUCT OVERVIEW

- The Diesel Fuel Tank Level Monitoring solution offered with the FireConnect® Gateway Controller is just another way we remotely connect you with the data that matters
- Providing not only real-time remote data regarding your fuel level, but local illuminated displays also offer redundancy to the system in whole. Ensuring levels are maintained with consumption through regular testing
- Local displays are preprogrammed based on site specific data for a turnkey solution with a simple 2-wire configuration to the FireConnect® Gateway
- Notifications can be preset for fire site leaders to receive alerts when critical levels are reached, ensuring NFPA compliance with critical low level
- Detailed instructions for both new installation and retrofit applications make installation a breeze
- Track your fuel consumption in real-time during a fire event utilizing the Incident Command page

FEATURES

- Intrinsically Isolated Gauge providing RoHS, CE, & ATEX Approvals from Top Industry Manufacturer
- 316SS Components & 1/4" Isolation Ball Valve
- Compatible with both New & Retrofit Applications
- Local Display Illuminated for 0-100% Range w/Low Fuel Level Alarm & Remote Notifications
- Accurate to as little as 1.0mm liquid level
- Real Time Monitoring & Incident Command standard on all FireConnect® Gateways with Diesel Fuel Level Monitoring
